

# TATTOO REMOVAL

·CITY LASER·  
CLINIC

City Laser Clinic | Suite 304, Level 3, 84 Pitt Street Sydney CBD NSW | Call 9232 8090 to book

Despite the known permanence of tattooing, many people make decisions to 'get ink' without fully appreciating the issues and permanence of tattoos. Their lifestyle circumstances or appreciation of their tattoo changes and they want the ink removed.

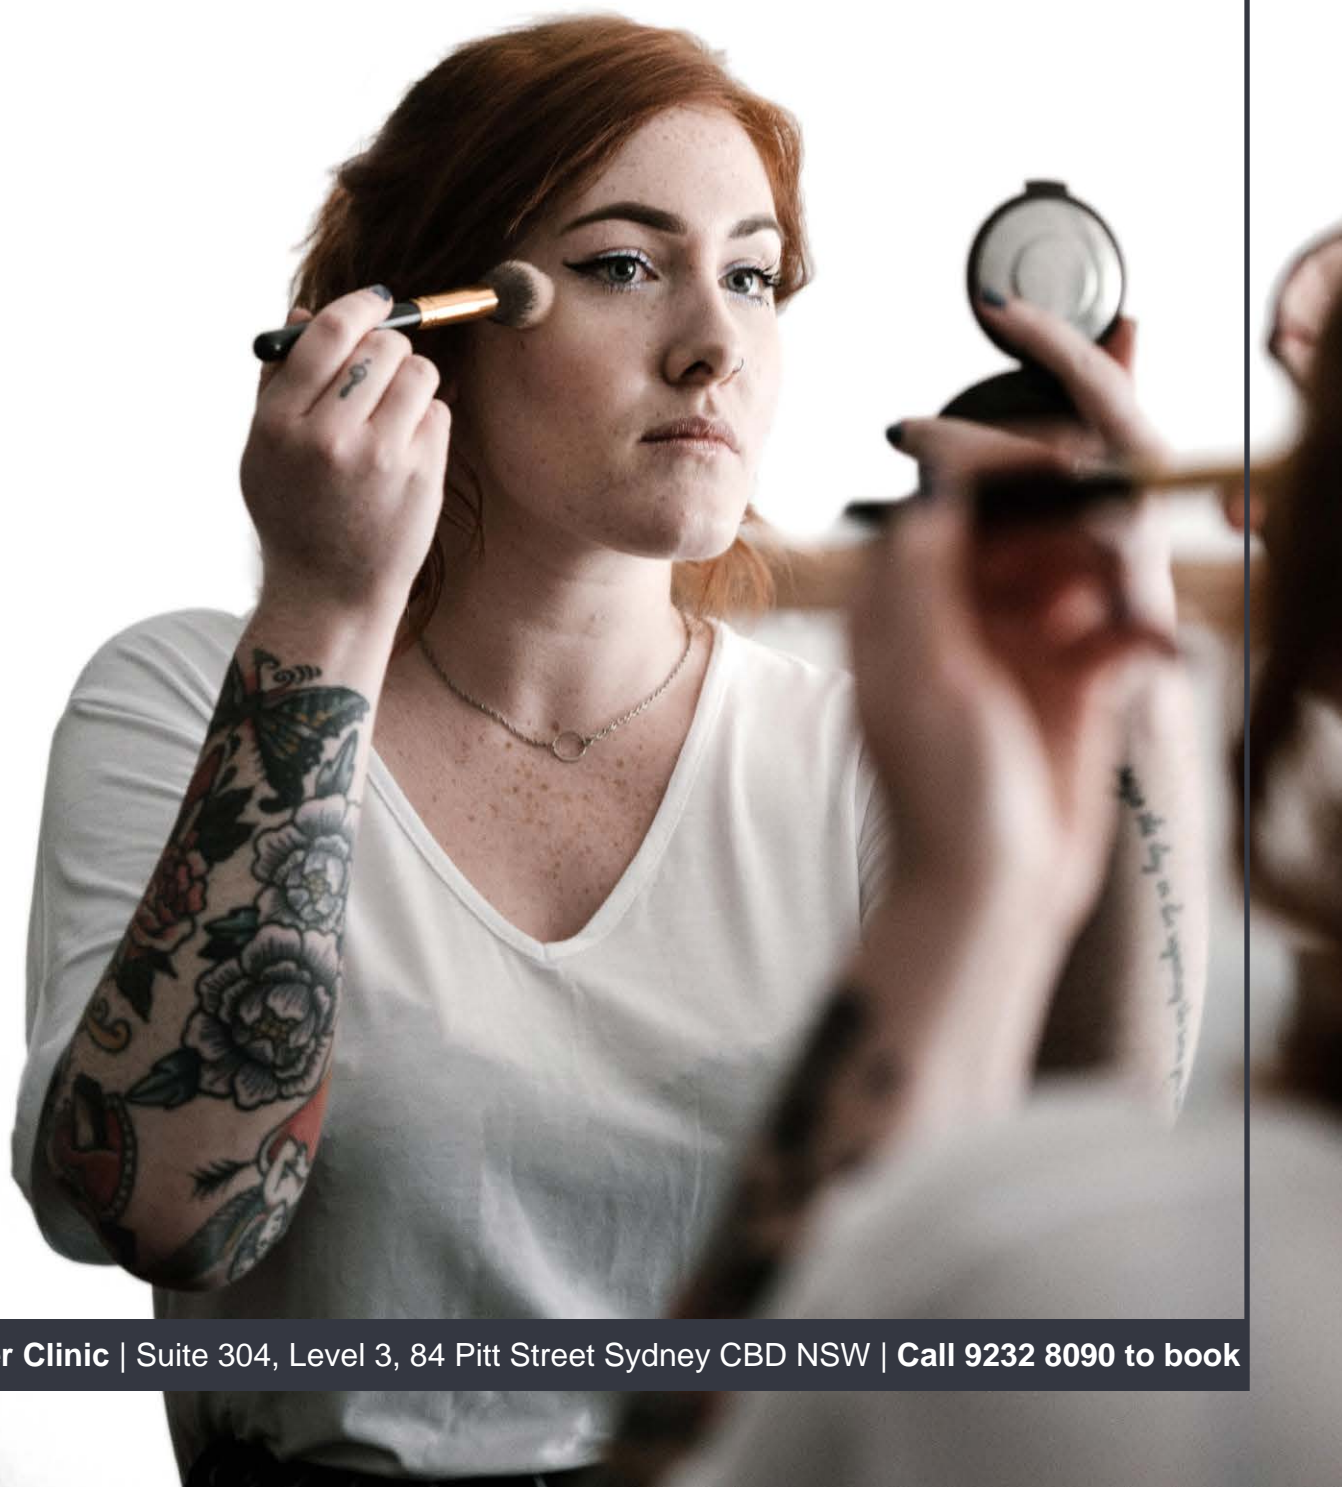

At City Laser Clinic we get many inquiries from people seeking tattoo removal. We have found that the Q-Switched laser is the safest and most effective device for tattoo removal.

The Q-Switched Laser uses PhotoAcoustic energy to penetrate the skin and safely target the tattoo at its core.

# 5 THINGS TO KNOW ABOUT LASER TATTOO REMOVAL

City Laser Clinic | Suite 304, Level 3, 84 Pitt Street Sydney CBD NSW | Call 9232 8090 to book

The laser breaks down the ink into micro particles which then drains through your body's natural processes. Treatments are performed at a minimum of 8 week intervals as the body can only break down so much ink at a time. Therefore treatments done earlier than 8 weeks may not be effective.

The tattoo removal laser treatment may create a superficial burn wound. Many clients will then develop blisters, crusts or scabs within 12-72 hours, which may last for 1-2 weeks or more. The treated areas may be pink or pale after the scab separates.

# 3

Keeping the area clean and dry is a must while it is healing. Clean the area gently with soap and water and then gently pat the area dry. You must avoid direct exposure to sunlight two weeks before and after the treatment. Wear a sunblock with an SPF of 50 over the area for 3 months following the treatment.

# 4

It takes longer to remove a tattoo than it took to have the tattoo applied. At City Laser Clinic, our experience is that it takes from 4 to sometimes 12 sessions at 8-12 weeks apart. This all depends on the number of colours used in your tattoo, the size of the design the type of ink used and the age of the tattoo.

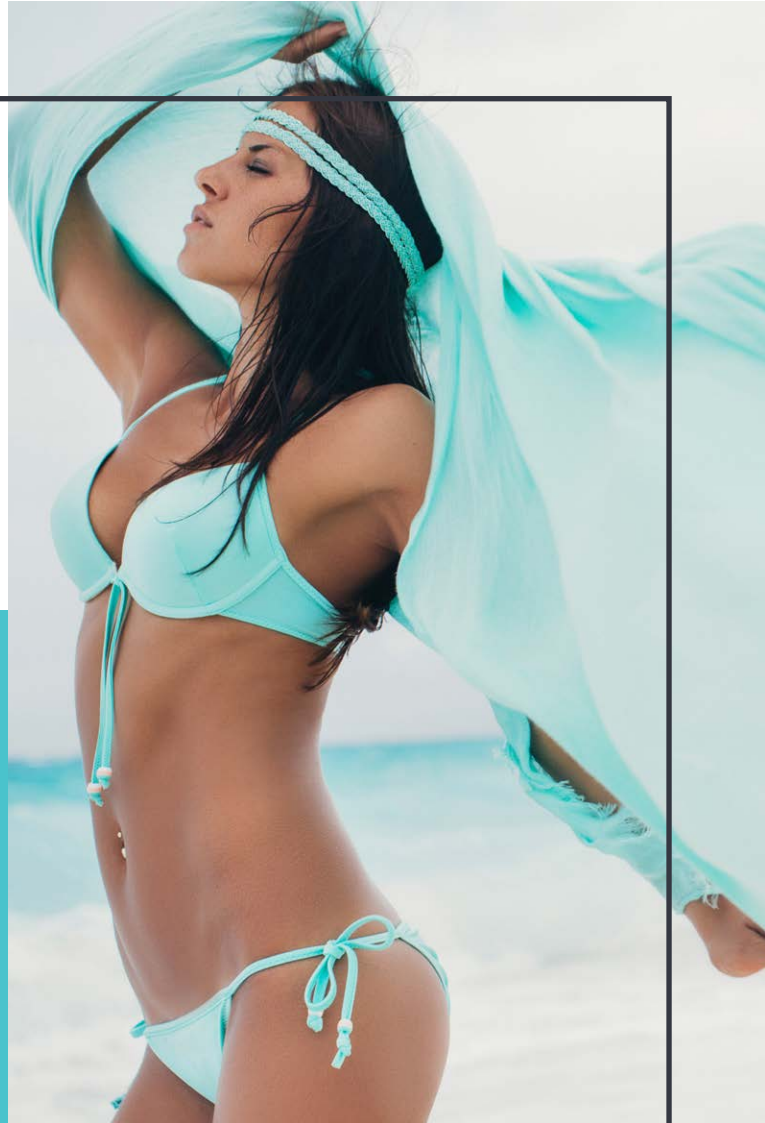

The feeling of laser tattoo removal feels much like the tattooing, a brief moment of mild dull pain (similar to a pinch), followed by a feeling of warmth in the treated areas. We also cool your skin before, during, and after the treatment to help numb the area being treated.
